# TASK – 2 (Linux)

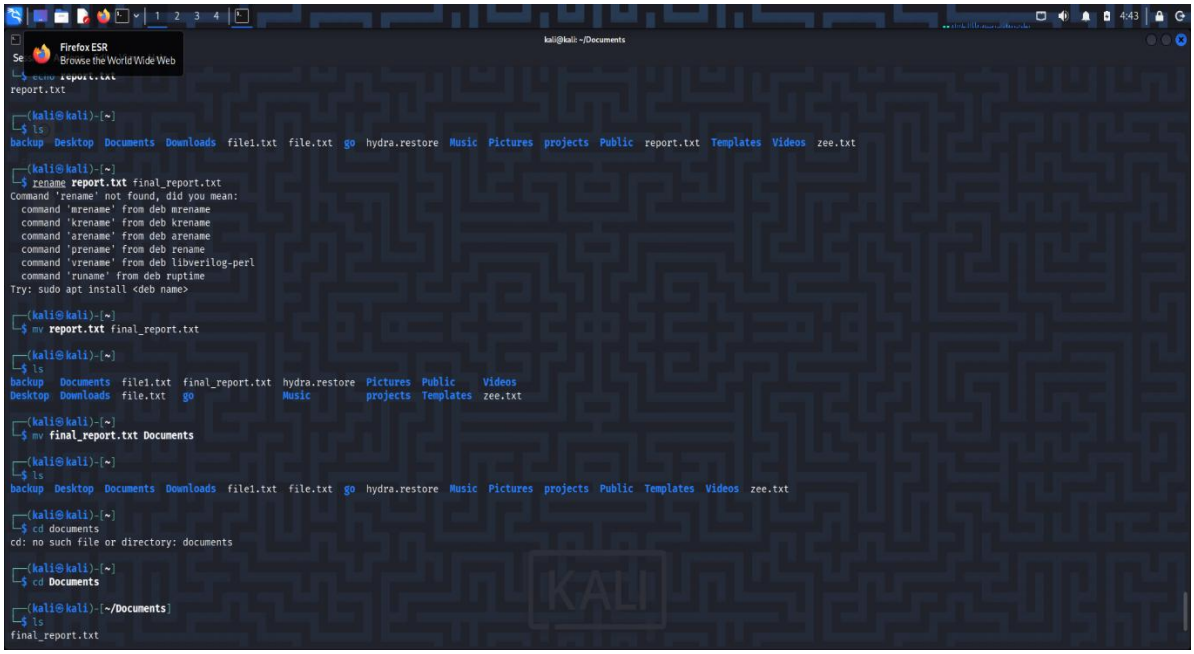

1. Create a dir called “projects “ & inside this directory create 10 text files

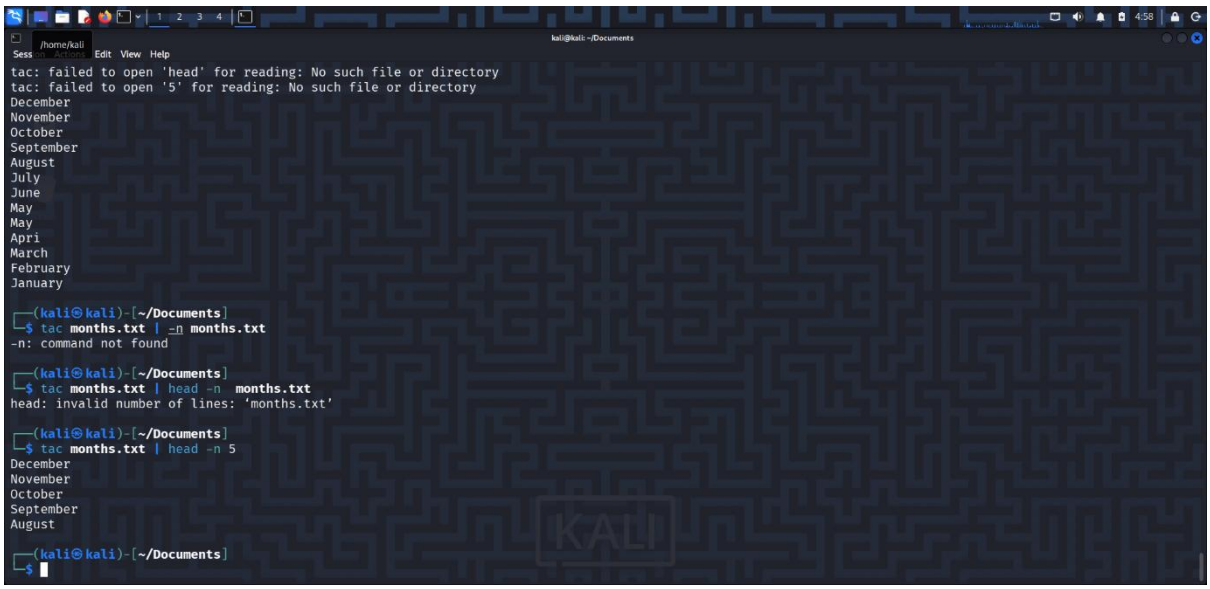

2. You have a directory called “projects” with some text files. Create a new directory named “backup” inside projects and copy all .txt files from projects to the backup directory.

3. In your home directory, there is a filenamed report.txt contain thename of all days. Rename this file to final_report.txt and move it to the documents folder

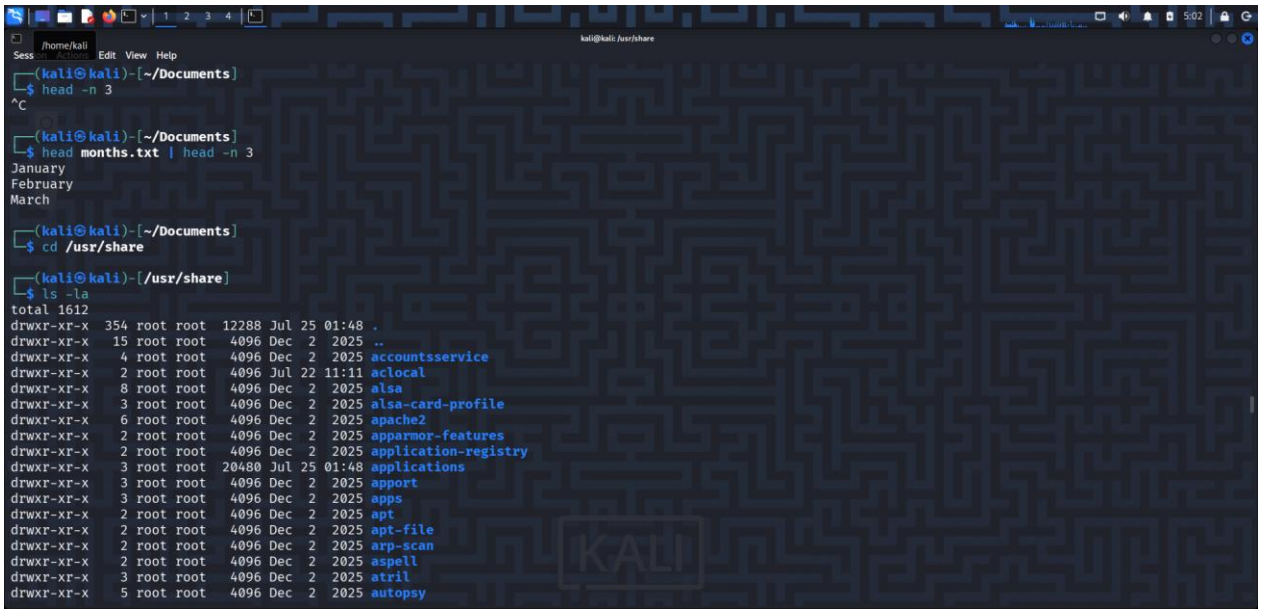

4. A file named months.txt contains months name. Display only the last 5 lines of this file.

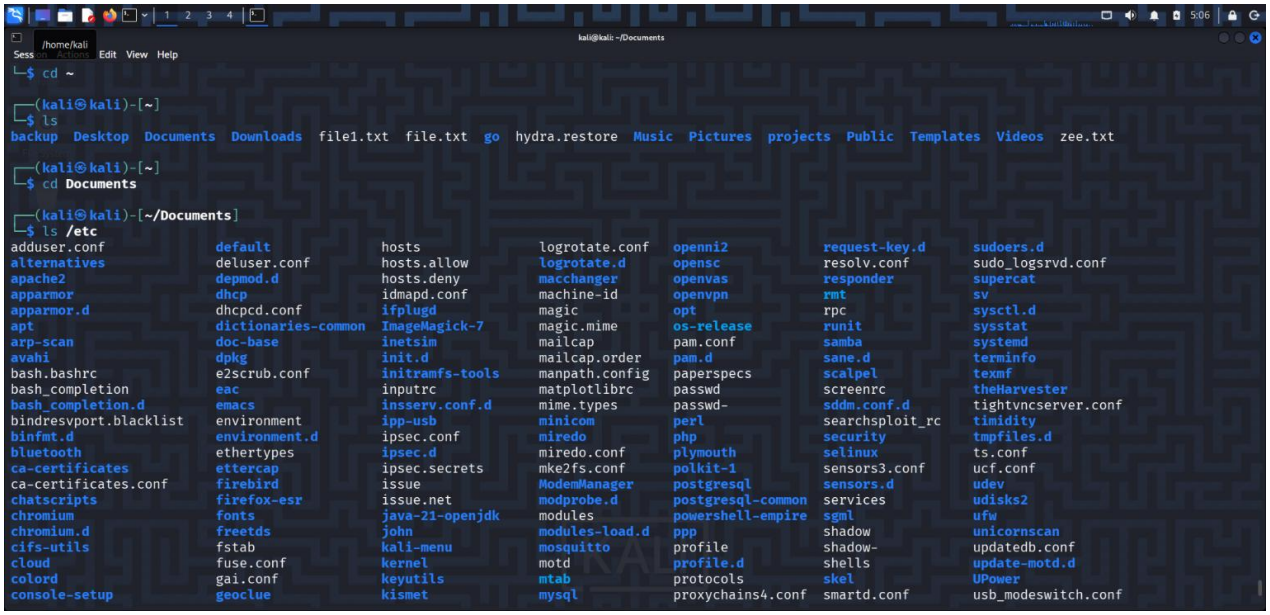

5. A file named months.txt contains months name. Display only the first 3 months of this file

6. Change to the directory /usr/share and list all the files, including hidden ones

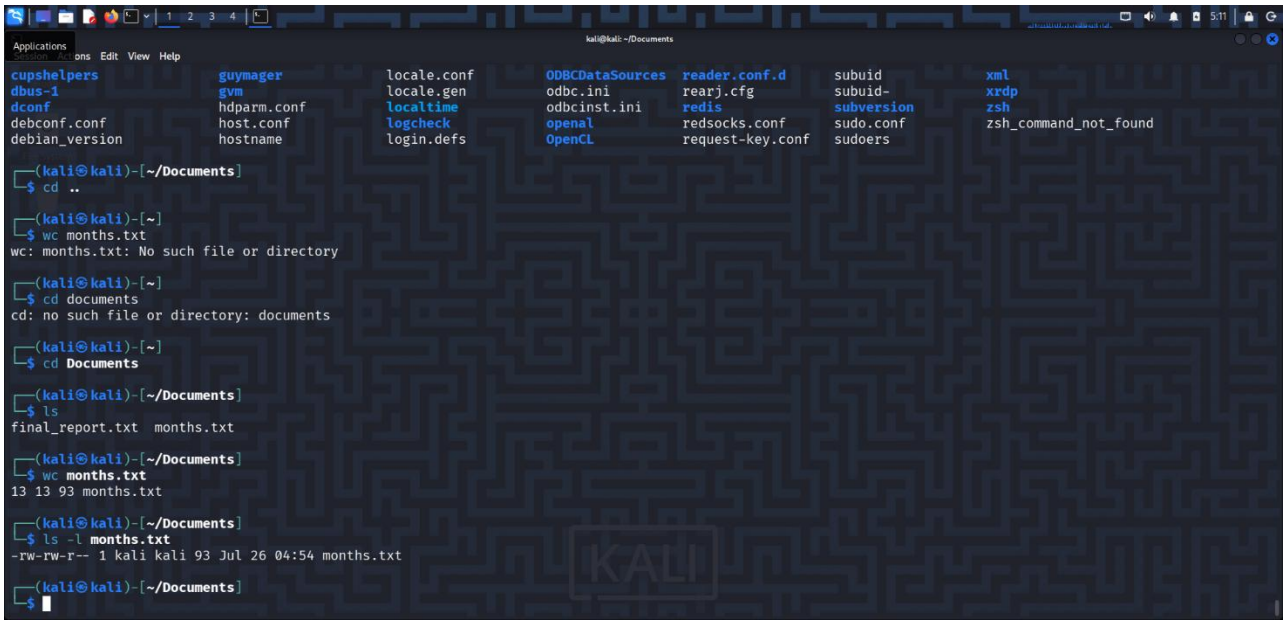

7. You are in the /home/kali/ documents directory. Without leaving this directory, list all files in the /etc directory.

8. In the file months.txt, display thenumber of lines, words, and characters using a single command.

9. Find the group owner permission on the file months.txt

10. In the project directory, put the months.txt file & then copy this file to /home/kali/Downloads
