Target : Zerodha

Step 1: Subdomain Enumeration :

1) Subfinder: Running passive subdomain enumeration.

2)Assetfinder: Discover additional subdomains.

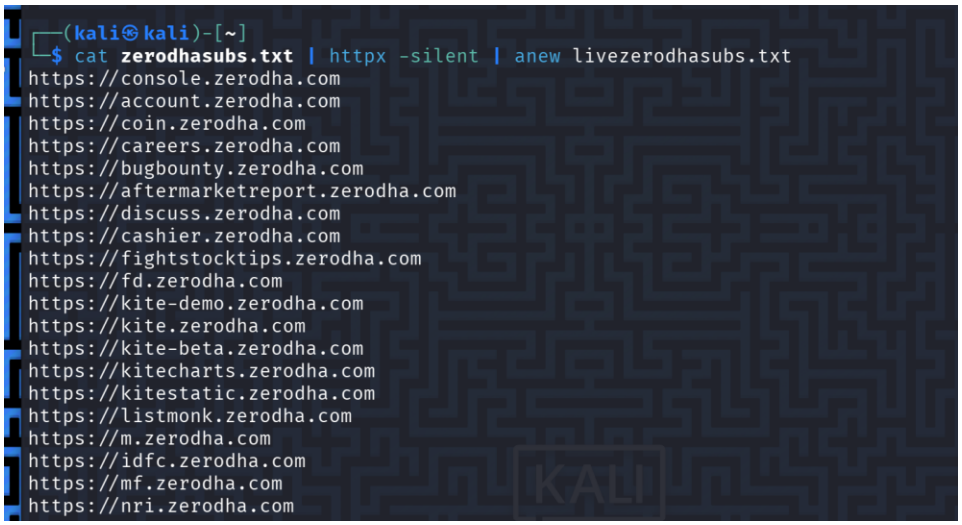

3) AlterX : Generating permutations/alterations for deeper discovery

Step 2: Filter Live Domains

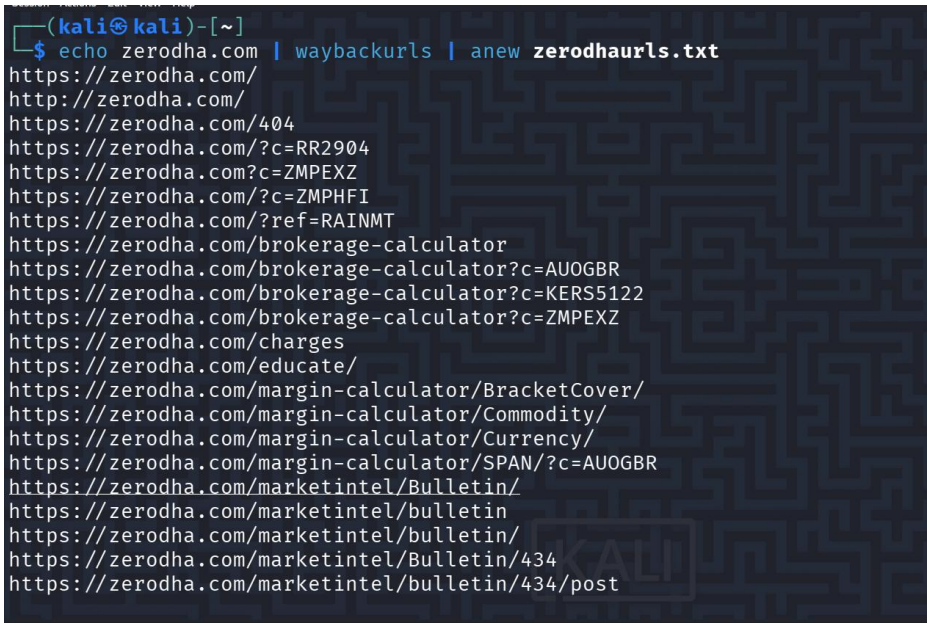

Httpx: Filter live URLs

Step 3: URL Enumeration & Endpoint Discovery

Waybackurls & Gau: Pull historical URLs from archive databases.

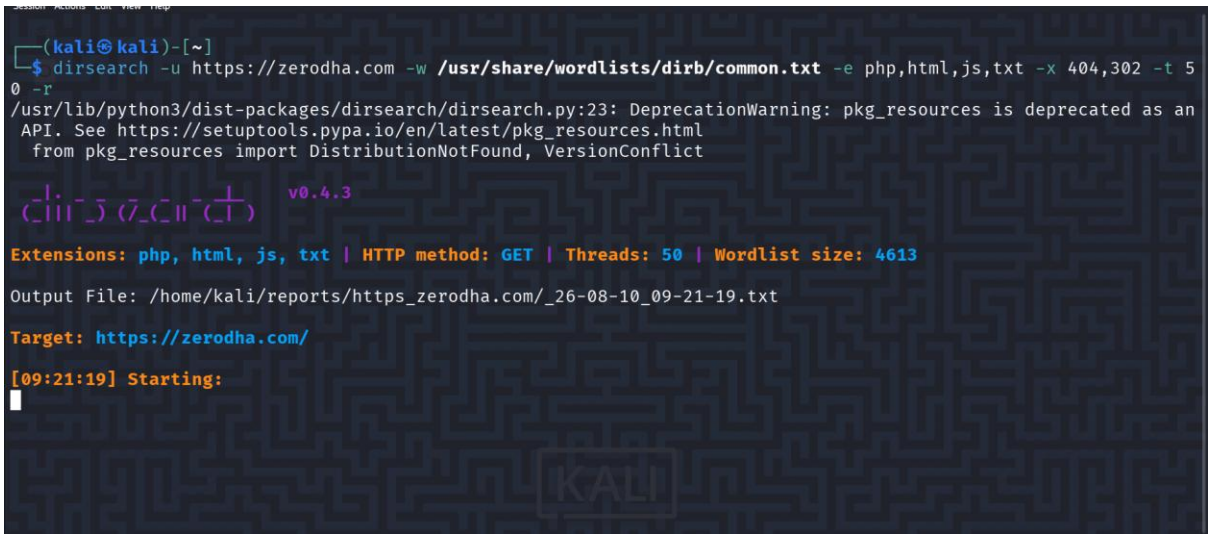

Katana: Crawl the live targets to extract links and hidden parameters

Step 4: Content & Directory Discovery

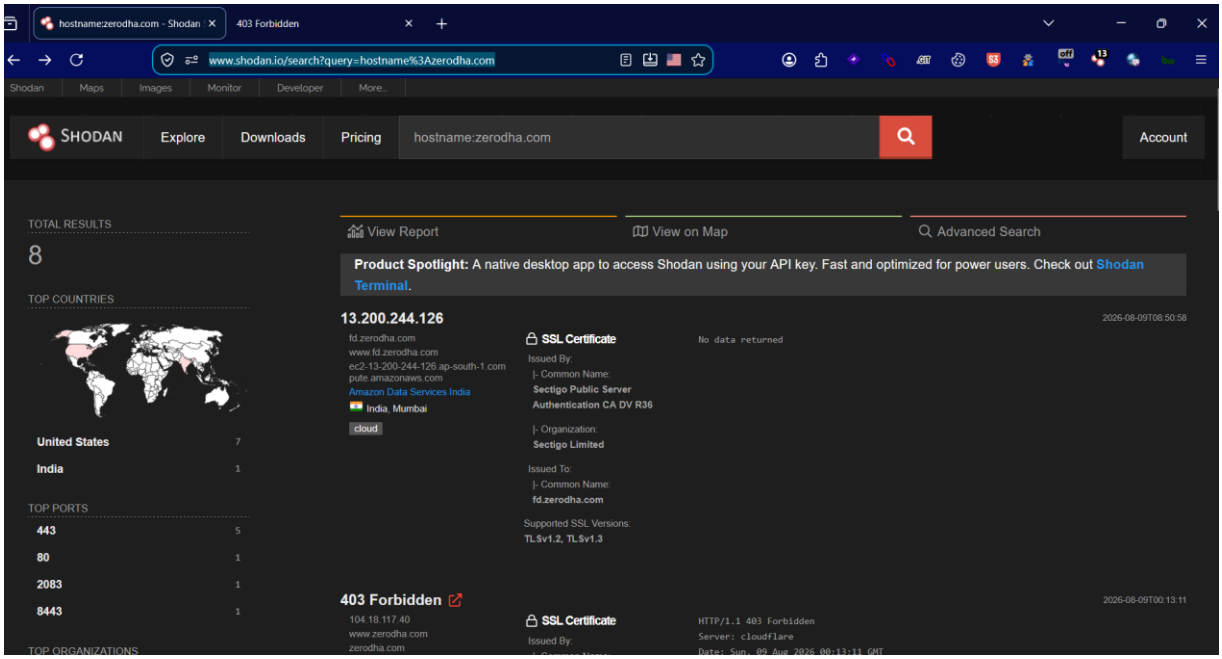

Dirsearch:

Step 5: Backup File & Sensitive Resource Checks

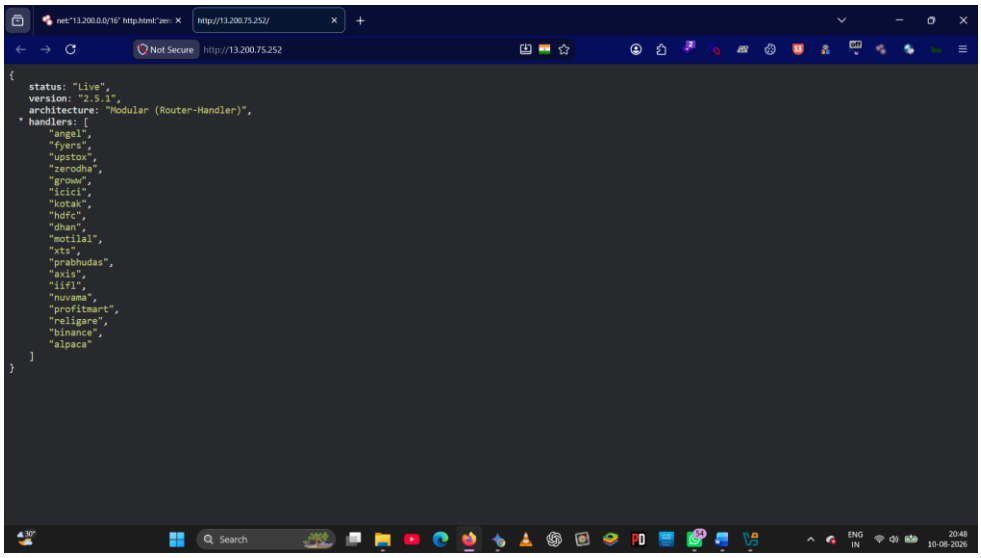

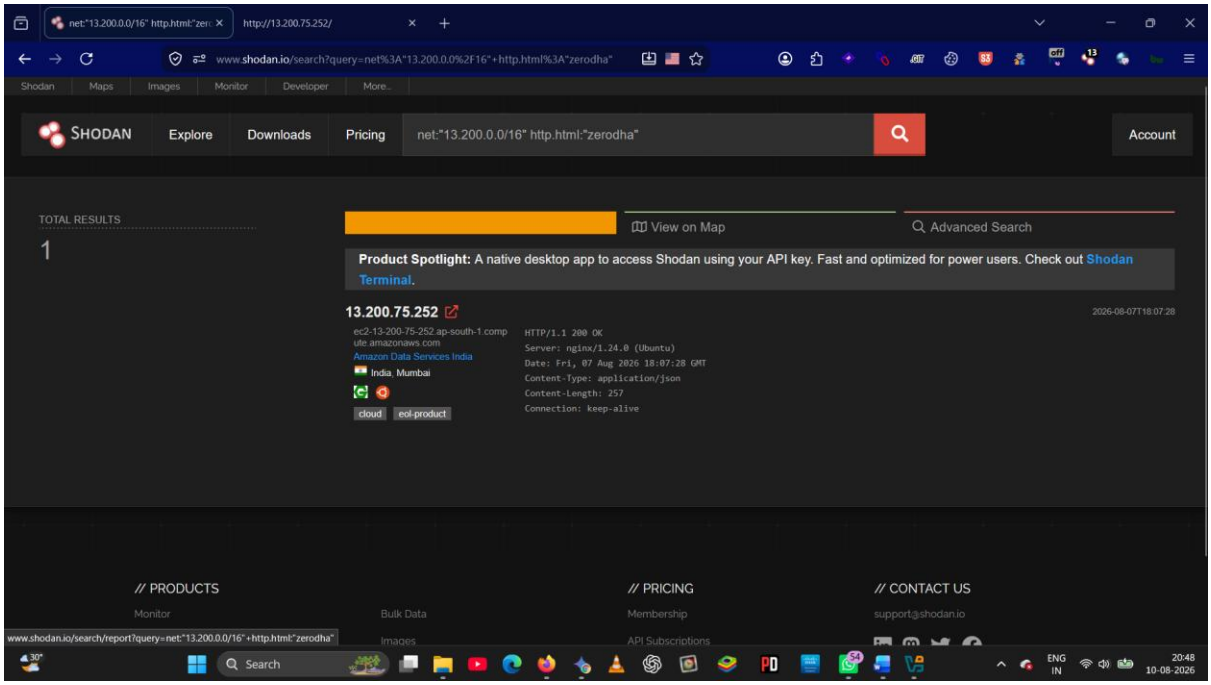

Shodan :

IP address (13.200.75.252), the request path, and the exposed JSON payload demonstrate that internal router configurations or service lists are publicly accessible without authentication.

Architectural Exposure: While it does not leak PII (Personally Identifiable Information) or passwords, it **does expose internal infrastructure details** specifically, that this particular server acts as a multi-broker router or middleware connector handling integrations for various financial services. Publicly exposing internal routing handlers or system status endpoints is generally considered a misconfiguration (information disclosure), as it helps an attacker map out the application's supported tech stack and integrations.
